

CRJ 2304 : FORENSIC SCIENCE with LAB

This class addresses what happens to evidence after it is collected by law enforcement and, therefore, focuses on the forensic science analysis techniques. Using a combination of lecture and laboratory work, students learn and apply how to analyze different types of evidence typically collected at a crime. Using the results of their own forensic analysis, students make comparisons between “known” and “unknown” exemplars and use this comparison to solve a mock crime scene in a final paper.
